Methodology

STEPS

Understand Business Process Understand the end-to-end operational cycle of international wholesale, from order placement to fund disbursement	Identify Key Metrics (KPIs) Define success indicators for financial performance, pricing, and shipping efficiency	Review Data Scan the company's macro performance on an aggregated daily/yearly basis	Identify Business Issues Drill down to pinpoint profit leakages and operational bottlenecks	Solutions and Recommendations Key insights leading to strategic solutions and recommendations
---	---	--	---	---

BUSINESS PROCESS

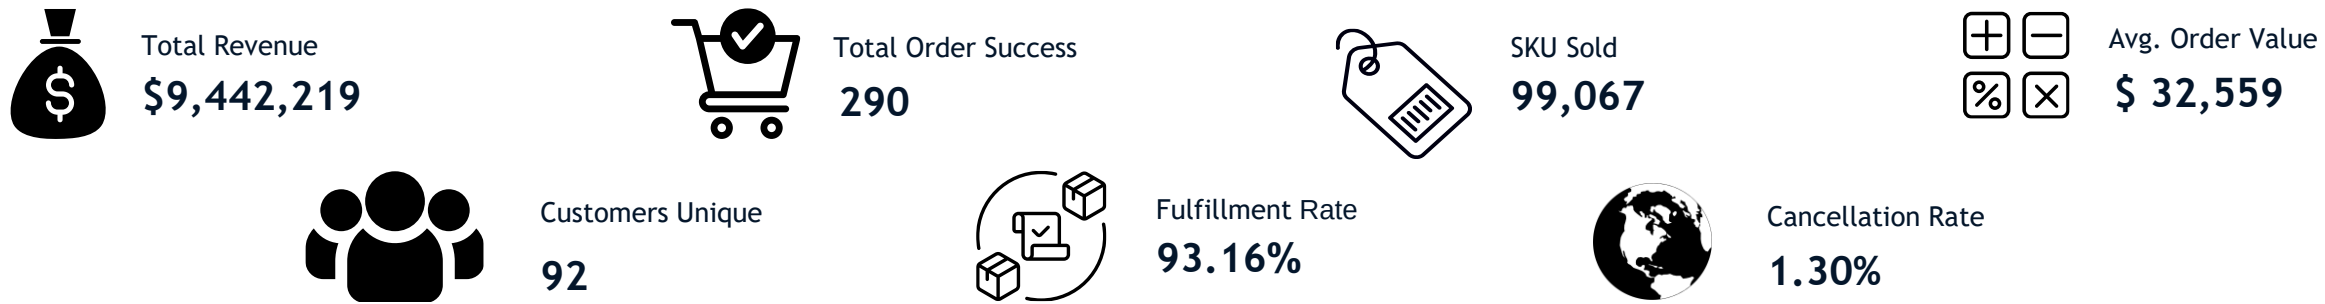

KPI

Business Performance (Total Realized Revenue, Price Realization Rate, Monthly Revenue, Revenue at Risk)	Operational/Fulfillment (Shipped Rate, Cancellation Rate, Order Line Volume)	B2B Clients (Average Order Value (AOV), Order Frequency, Deal Size Distribution, Customer Concentration, Territory Customer Contribution)
---	--	---

Overview

Overall Performance (2003 - 2005)

Metrics

1. **Total Revenue:** Total sales value.
2. **Total Order:** Total number of unique orders (1 order number can contain multiple product lines/SKUs purchased).
3. **SKU Sold:** Cumulative total of physical units of vehicle models sold.
4. **Avg. Order Value:** *Total Revenue/Total Order* (average value per order (which may contain multiple SKU))
5. **Fulfillment Rate:** The percentage of orders successfully shipped relative to the total number of orders received.
6. **Customers Unique:** Total number of distinct B2B wholesale clients/companies making purchases within this period.
7. **Country:** Total number of unique destination countries where B2B orders were placed during the period.

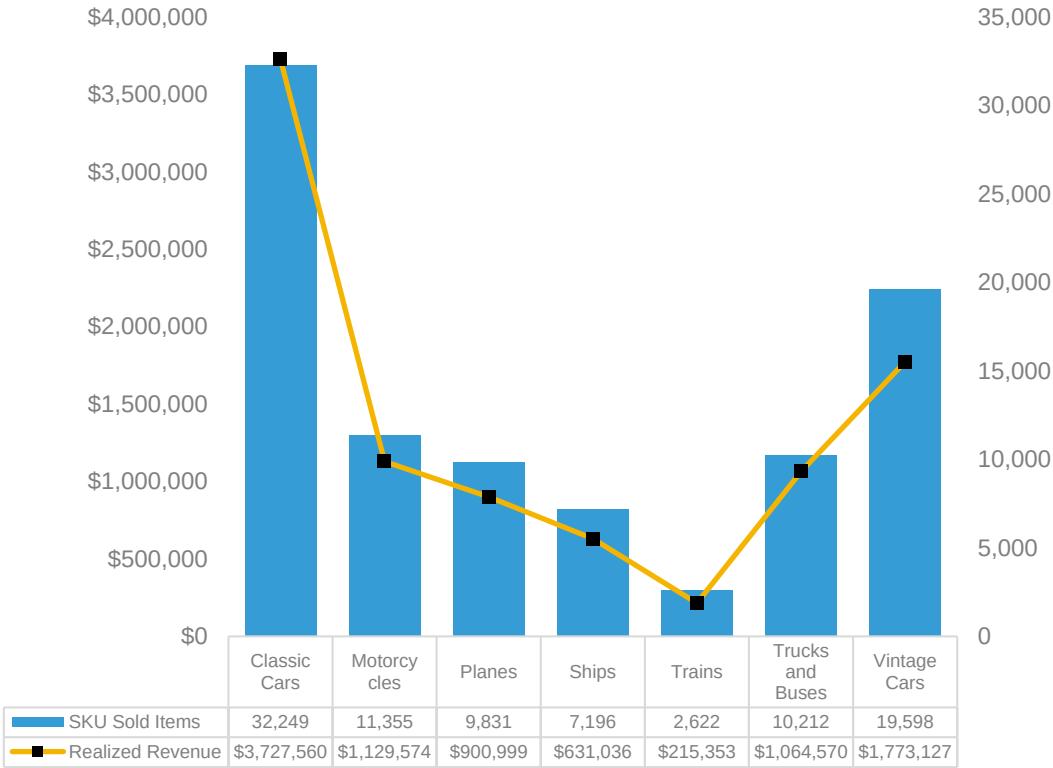

Key Takeaways

1. Our company operates in a high ticket **B2B Wholesale** sector, characterized by a low frequency but high value transaction volume (**290 unique orders** from **92 active business clients**), however it generates high average transaction value with an **AOV of \$32,559** per transaction.
2. The company's export operations serve around **19 different countries in this period**, generating total overall revenue of **\$9,442,219** through the export of **99,067 units (SKU Sold)** out of inventory.
3. Logistics operations performed very well, with this period **fulfillment rate of 93.16%**. This leaves a minor **1.30%** of orders stuck in pending statuses cancellation rate.

Which Product Lines are Driving Our Wholesale Demand?

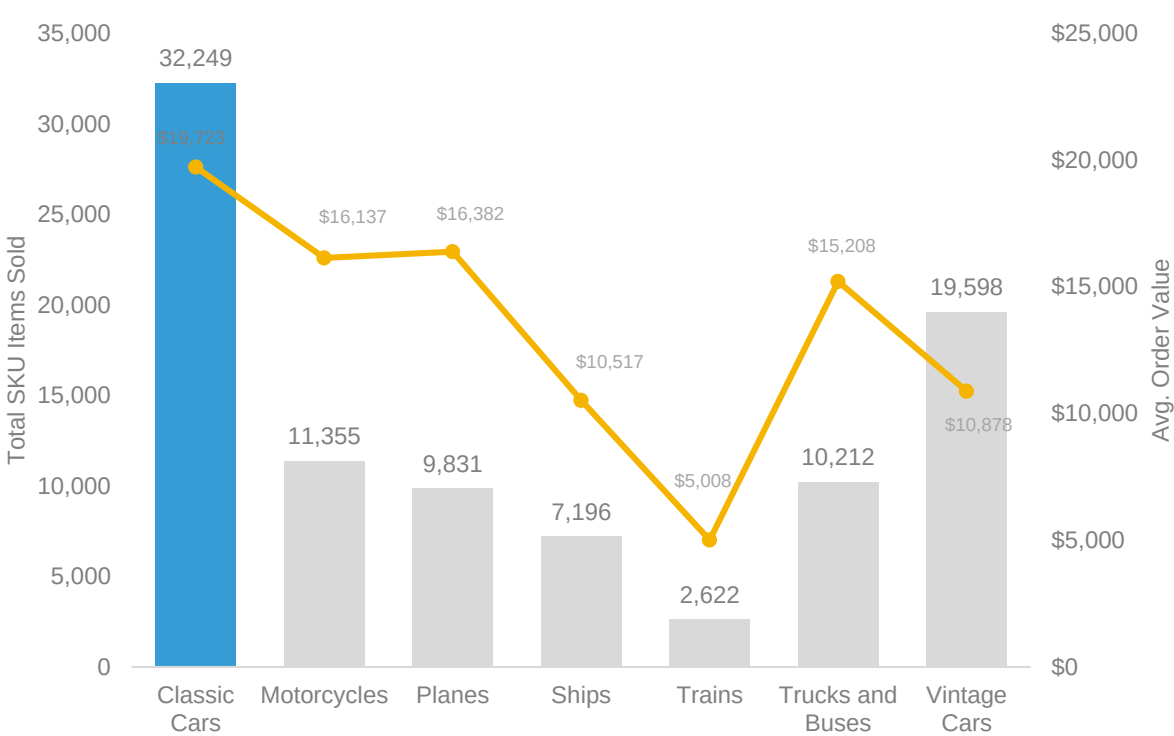

Classic Cars dominates the wholesale demand, contributing nearly 40% of total company revenue

SKU Sold & Realized Revenue by Product

The **Classic Cars** category generated **39.8%** of total revenue, resulting in significant *realized revenue* of more than **\$3.72 million**, with around **32,000 units ordered**

Avg. Order Value & SKU Sold by Product

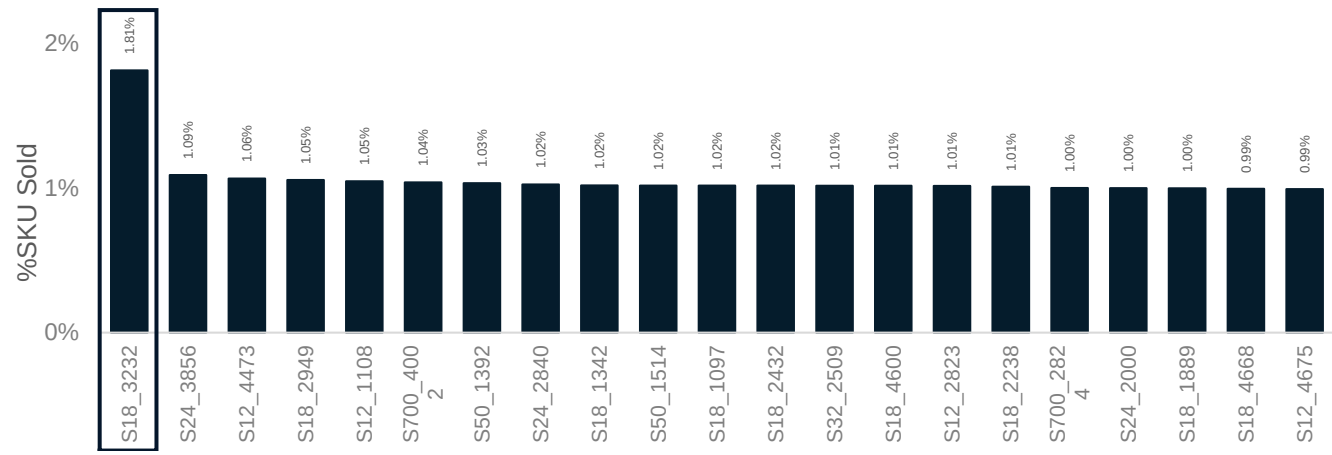

The **Classic Cars** category serves as a **key revenue driver** for our company. This product line generates the **highest number of orders (32,249 units)** and also leads in **Average Order Value (AOV) (\$19,723)** compared to other product lines. This demonstrates that our classic car product generates the highest revenue and volume among all product lines.

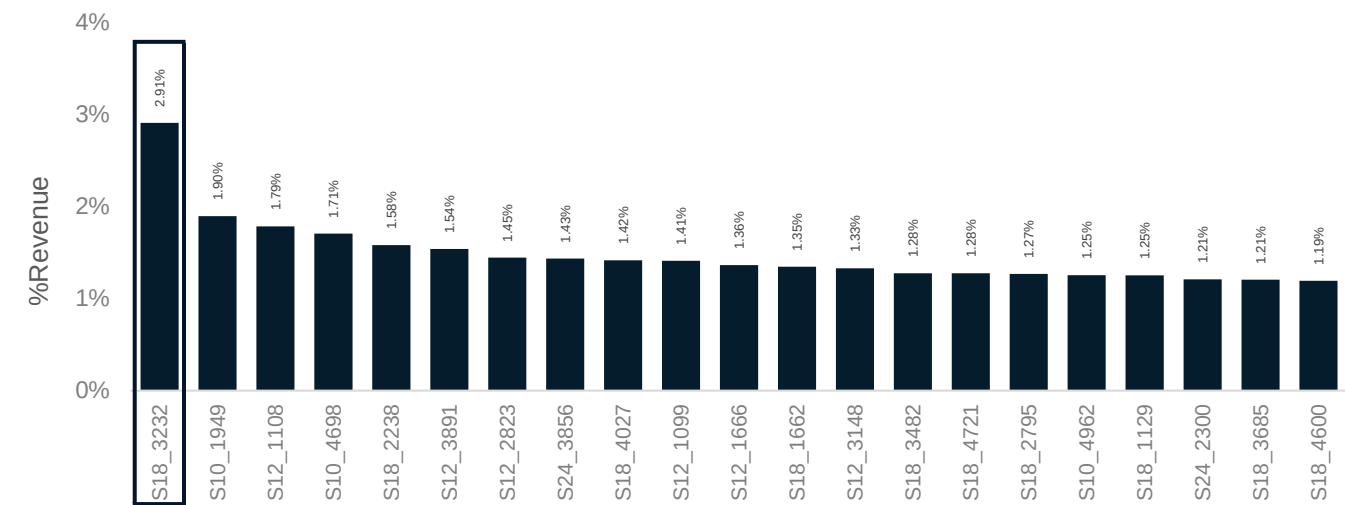

Which Items Drive the Highest Sales Volume and Revenue?

Only 6 of the top-selling SKUs also rank among the top revenue contributors

Top 20 SKUs Sold

Top 20 SKUs by Revenue Contribution

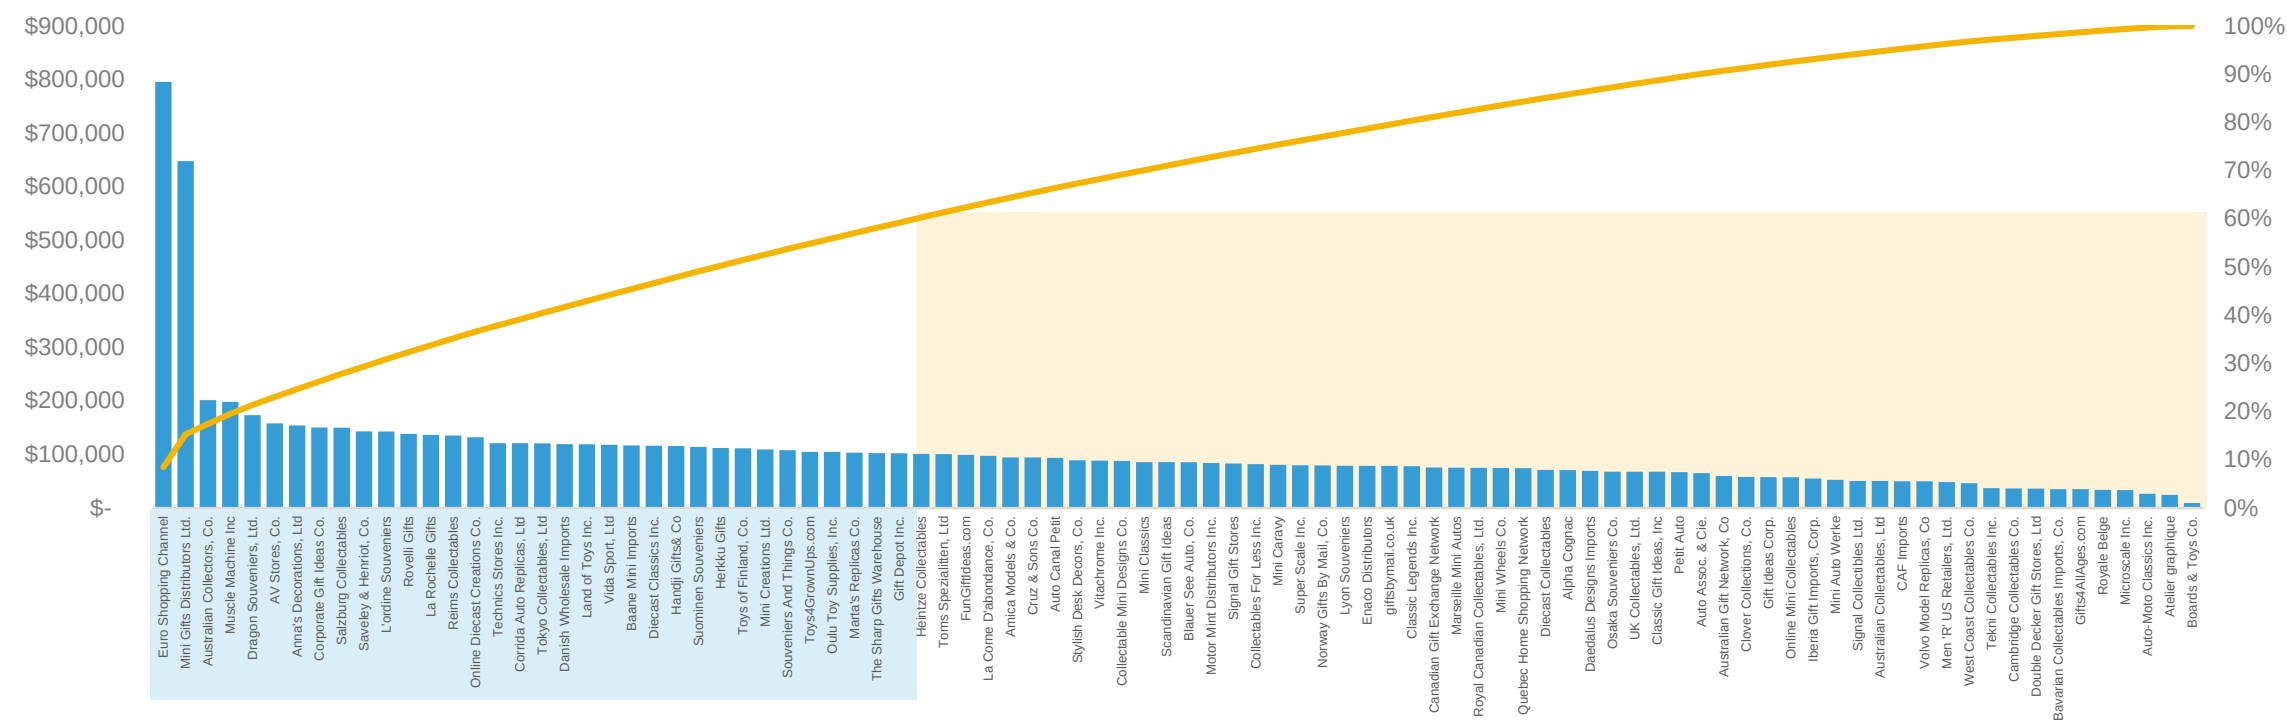

S18_3232 is the SKU with the highest sales volume (**1.81% of total units sold**) and the highest revenue (**2.91% of total revenue**) in the company. This SKU is part of the Classic Cars product line. Of the 20 SKUs with the highest units sold, 8 are from the Classic Cars product line. Meanwhile, of the 20 SKUs with the highest revenue, 14 are also from the Classic Cars product line. This data indicates that **Classic Cars** is the product line with the **highest items sold** and **revenue turnover** in our company.

Is Our Revenue Concentrated Among a Few Key Customers?

Yes, we face a moderate-to-high concentration risk where around 40% of our customers drive 60% of total revenue.

Cumulative % revenue by Customers (Pareto)

Euro Shopping Channel and Mini Gifts Distributors Ltd. are our largest revenue contributors. The top 32 customers (around 40% of our total 92 customers) have accounted for 60% of total revenue. This not extreme concentration. but it still makes the business vulnerable to significant revenue risk if one of the major customers decides to churn or stop ordering.

Is Our Revenue Concentrated Among a Few Key Customers?

Our top two customers drive revenue through high order frequency, while mid tier customers generate high value purchases but with lower frequency

Profile and Purchasing Behavior of Top 10 Customers

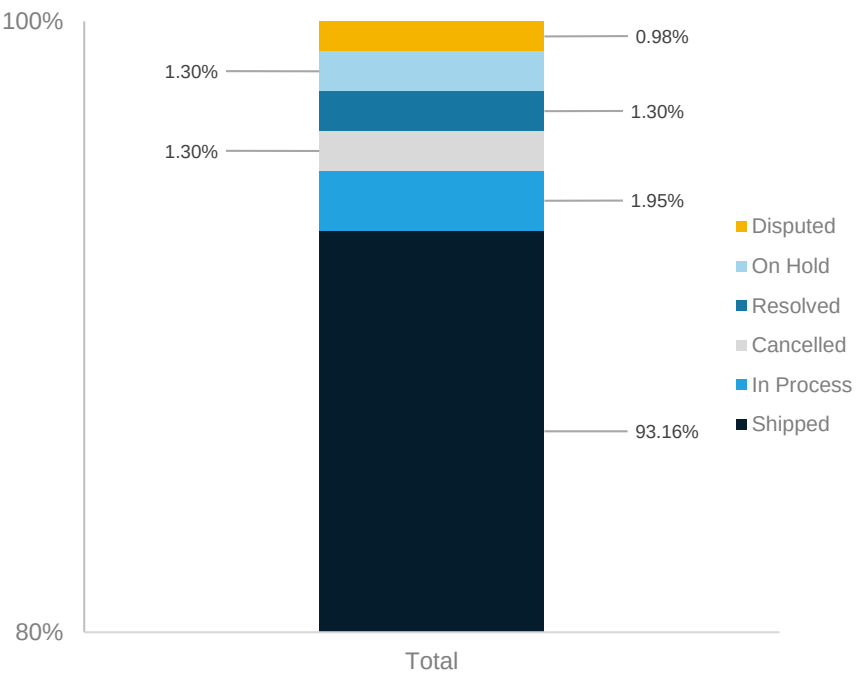

Customer	Revenue	% Revenue	Avg. Order Value	Order Frequency
Euro Shopping Channel	\$795,328	8.42%	\$34,579	23
Mini Gifts Distributors Ltd.	\$647,596	6.86%	\$40,475	16
Australian Collectors, Co.	\$200,995	2.13%	\$40,199	5
Muscle Machine Inc	\$197,737	2.09%	\$49,434	4
Dragon Souvenirs, Ltd.	\$172,990	1.83%	\$34,598	5
AV Stores, Co.	\$157,808	1.67%	\$52,603	3
Anna's Decorations, Ltd	\$153,996	1.63%	\$38,499	4
Corporate Gift Ideas Co.	\$149,883	1.59%	\$37,471	4
Salzburg Collectables	\$149,799	1.59%	\$37,450	4
Saveley & Henriot, Co.	\$142,874	1.51%	\$47,625	3

Euro Shopping Channel leads with **\$795K (8.4%)** of total revenue but not because of the largest order size. Its **\$34,579** average order value is actually below the top 10 median, the position is earned through **23 orders**, the highest frequency in the group. In contrast, **AV Stores, Co.** places the highest average order value (**\$52,603**) but only orders **3 times**, landing it at rank 6. This shows the top 2 customers scale revenue through **order frequency**, while several mid ranked customers rely on **larger but less frequent** purchases.

How Does the Top 10 Repeater Customers' Order Status Distribution?

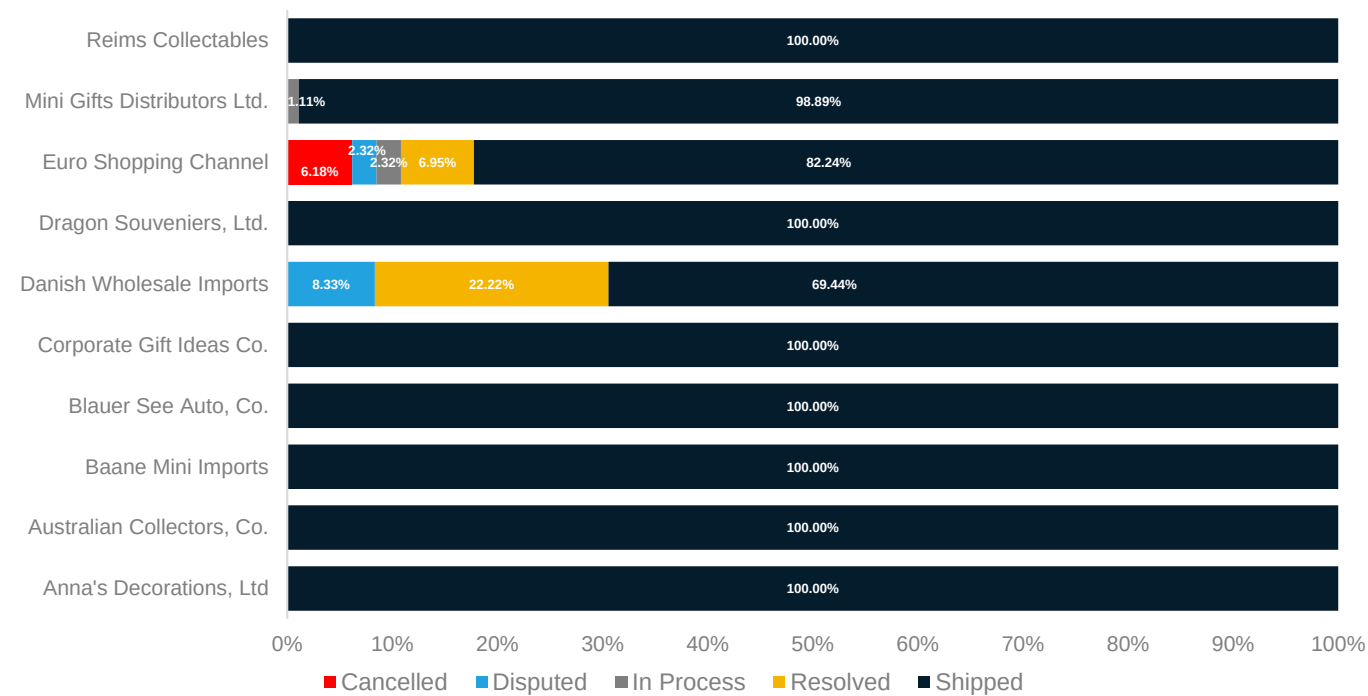

Confirmed order failures are concentrated among 2 of the top 10 customers; they're Euro Shopping Channel and Danish Wholesale Imports

Order Status Distribution

93.16% of all platform orders are **successfully shipped**. Of the remaining **6.84%**, only **2.28%** represent confirmed **failures** (cancelled and disputed), **3.25%** still **in progress** (in Process and On Hold), and orders that faced an issue but were ultimately **Resolved (1.30%)**. This indicates the platform's fulfillment process is **fundamentally healthy**, with true failure representing a small fraction of total order volume.

%Distribution Status for Top 10 Customer by Total Order

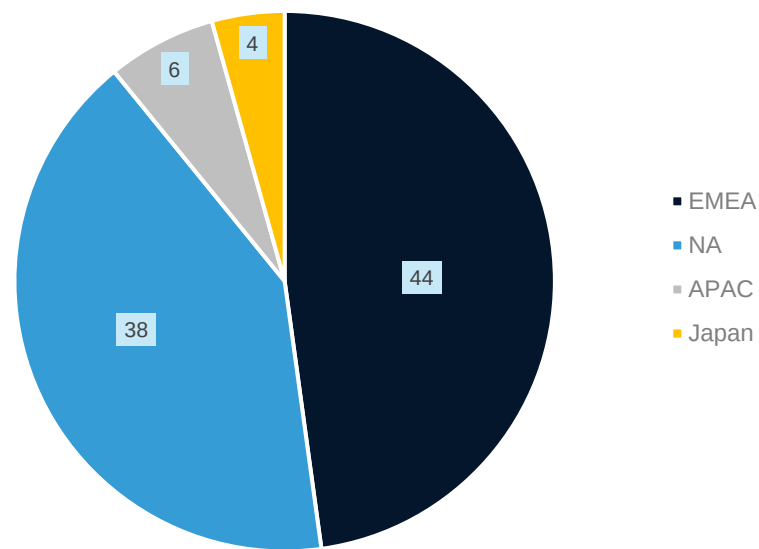

Confirmed failures are concentrated in **Euro Shopping Channel** (8.5% combined Cancelled/Disputed) and **Danish Wholesale Imports** (8.33% Disputed). Danish shows the highest Resolved rate (22.22%), indicating recurring issues that get fixed rather than escalate. Notably, **6 of these 10 repeat customers also rank in the Top 10 by revenue**, but **4 (Reims Collectables, Danish Wholesale Imports, Blauer See Auto Co., and Baane Mini Imports) only surface here**, revealing a frequent but low value customer segment invisible in revenue only analysis.

Which Territory Has the Most Customers, and Are They the Biggest Contributors?

EMEA and NA hold 89% of all customers and dominate the top revenue contributors too

Total Customer based on Territory

Out of 92 total customers, **EMEA (44)** and **North America (38)** together represent **89%** of the customer base, while **APAC (6)** and **Japan (4)** remain a small minority. This concentration mirrors the revenue pattern seen earlier. EMEA and NA as the largest revenue contributors and also home to the vast majority of the company's customer relationships.

Top 10 Customers by Revenue

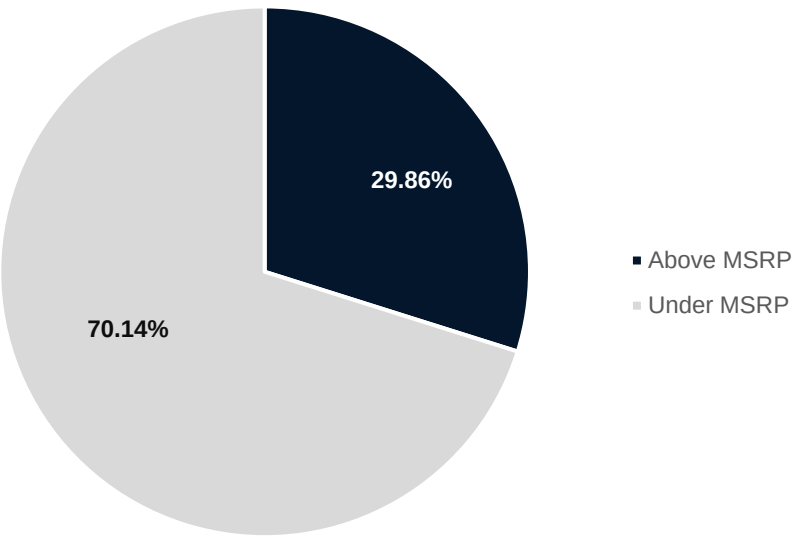

Customers	Revenue	%Revenue	Avg. Order Value	Order Frequency
Euro Shopping Channel	\$795,328	8.42%	\$34,579	23
Mini Gifts Distributors Ltd.	\$647,596	6.86%	\$40,475	16
Australian Collectors, Co.	\$200,995	2.13%	\$40,199	5
Muscle Machine Inc	\$197,737	2.09%	\$49,434	4
Dragon Souvenirs, Ltd.	\$172,990	1.83%	\$34,598	5
AV Stores, Co.	\$157,808	1.67%	\$52,603	3
Anna's Decorations, Ltd	\$153,996	1.63%	\$38,499	4
Corporate Gift Ideas Co.	\$149,883	1.59%	\$37,471	4
Salzburg Collectables	\$149,799	1.59%	\$37,450	4
Saveley & Henriot, Co.	\$142,874	1.51%	\$47,625	3

The top 10 customers by revenue collectively contribute **29.3%** of total company revenue. **Euro Shopping Channel** leads not through order size but through frequency, **23 orders** at a below median Average Order Value (**\$34,579**) while **AV Stores, Co.** achieves the highest AOV (**\$52,603**) with only **3 orders**, ranking 6th overall. This confirms two distinct paths to high revenue: frequent, smaller transactions versus infrequent, larger ones.

Are We Structurally Reliant on Below MSRP Pricing, and Which Product Lines Drive It?

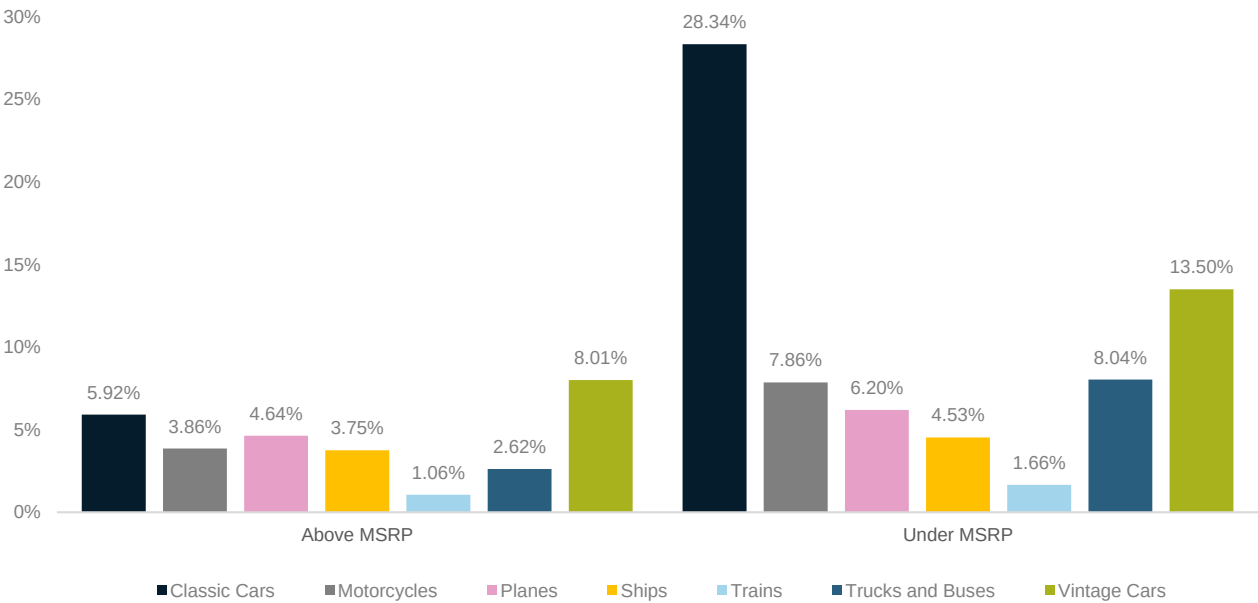

70% of all units are sold below MSRP and Classic Cars alone drives 28% of that volume

Proportion of Units Sold Above vs. Below MSRP

70.14% of all units sold are priced below MSRP, versus only 29.86% above. This confirms the company's revenue base leans heavily on discounted pricing rather than list price, a structural pattern, not an occasional promotion.

Above MSRP vs. Below MSRP

Classic Cars dominates the Below MSRP group at roughly 28%, by far the largest share while it contributes only around 6% to the Above MSRP group. This is the opposite of a healthy pattern: the company's largest product line is also its most heavily discounted.

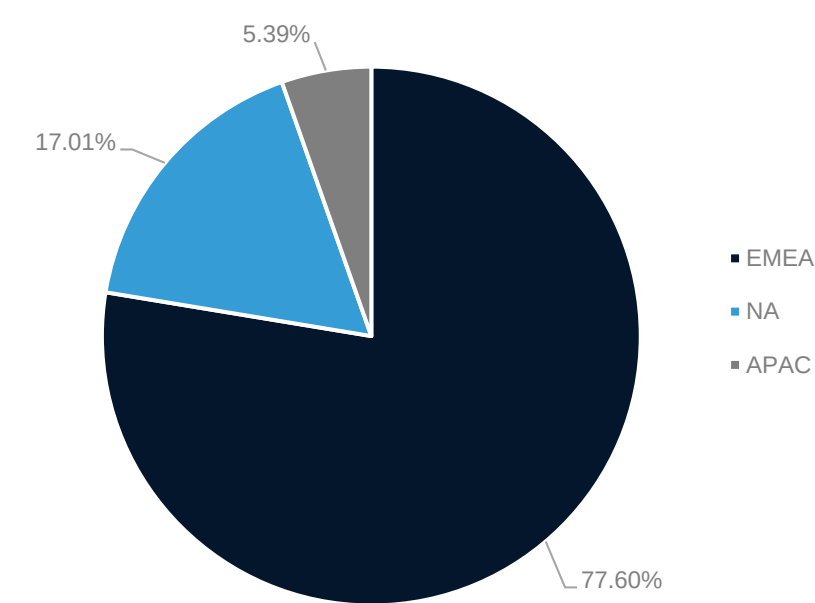

Business Question

1. Which territories contribute to revenue failure through canceled and disputed orders? Is this loss concentrated in specific customers and products?
2. Is the revenue failure spread across all SKUs or concentrated within a small subset? Are there clear patterns in canceled/disputed orders from these customers, and do other EMEA customers experience the same issue? What recommendations can be provided to mitigate losses from canceled and disputed orders?
3. How much revenue is potentially at risk, and which areas should be prioritized for recovery? If successful, how significant is the financial impact on total revenue?
4. Does price discounting below MSRP on Classic Cars effectively drive higher order volumes, or does it result in pure margin leakage? Is there a strong correlation between discount depth and customer purchase volume?

Which Territory Suffers the Biggest Revenue Loss from Cancelled/Disputed Orders?

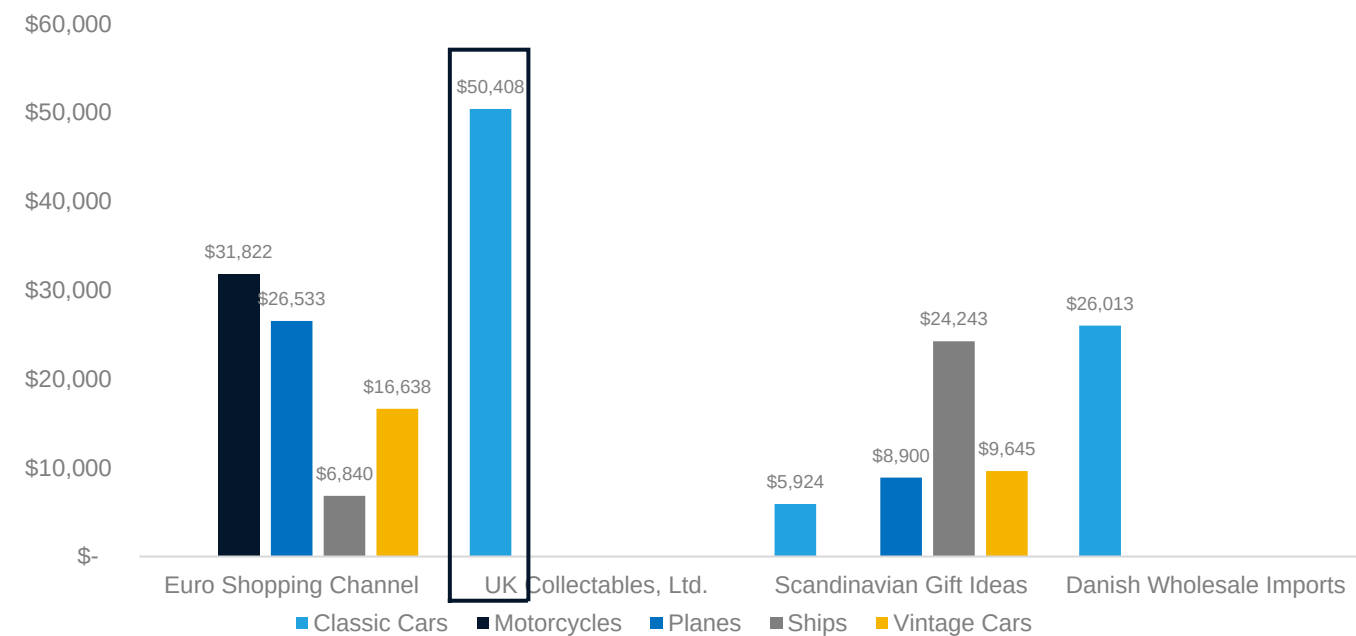

EMEA accounts for 77.6% of all lost revenue, driven almost entirely by one customer

Revenue Lost by Territory

EMEA accounts for 77.6% of total revenue lost to Cancelled/Disputed orders, dwarfing NA (17.01%) and APAC (5.39%). From this, we can see that the EMEA region accounted for the largest share of the failure.

Lost Revenue by Customer and Product Line

Losses are concentrated in just 4 accounts. **UK Collectables, Ltd.** alone accounts for over **\$50K** in lost revenue, entirely from **Classic Cars**, a single category failure. **Euro Shopping Channel**, by contrast, shows losses spread across nearly every product line (Classic Cars, Motorcycles, Planes, Vintage Cars), suggesting a broader account-level issue rather than a product-specific one.

Which Territory Suffers the Biggest Revenue Loss from Cancelled/Disputed Orders?

Root cause isn't SKU specific or order size, it's a single order batch placed in June 2004

SKUs Involved in UK Collectables' Cancelled/Disputed Orders

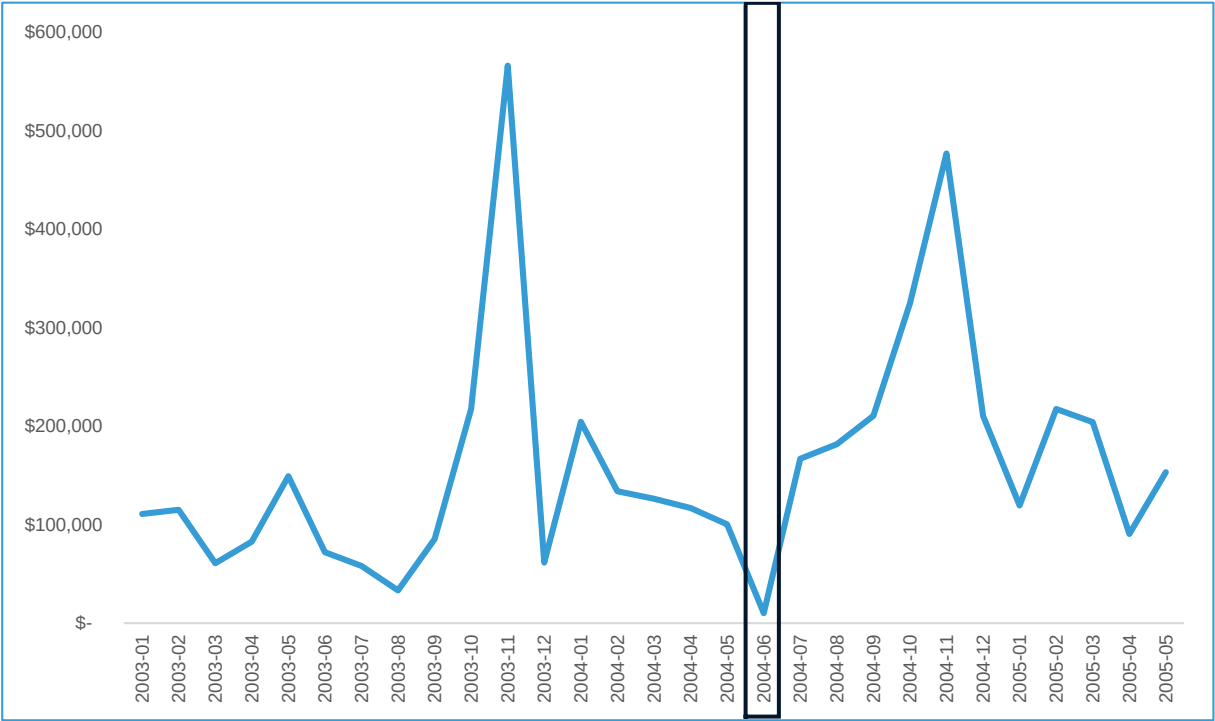

Territory	Quantity
S12_4675	41
S18_3232	40
S24_2972	40
S24_3856	39
S18_2870	37
S18_1984	33
S18_3685	31
S18_1129	26
S12_3990	25
S24_3371	24
S18_1589	24
S12_1099	24
S18_1889	23
S12_3380	22
Grand Total	429

The SKUs from UK Collections that were canceled or disputed are from the same order

June 2004

Customers EMEA	Quantity
Euro Shopping Channel	605
UK Collectables, Ltd.	429

EMEA Monthly Revenue Trend - June 2004

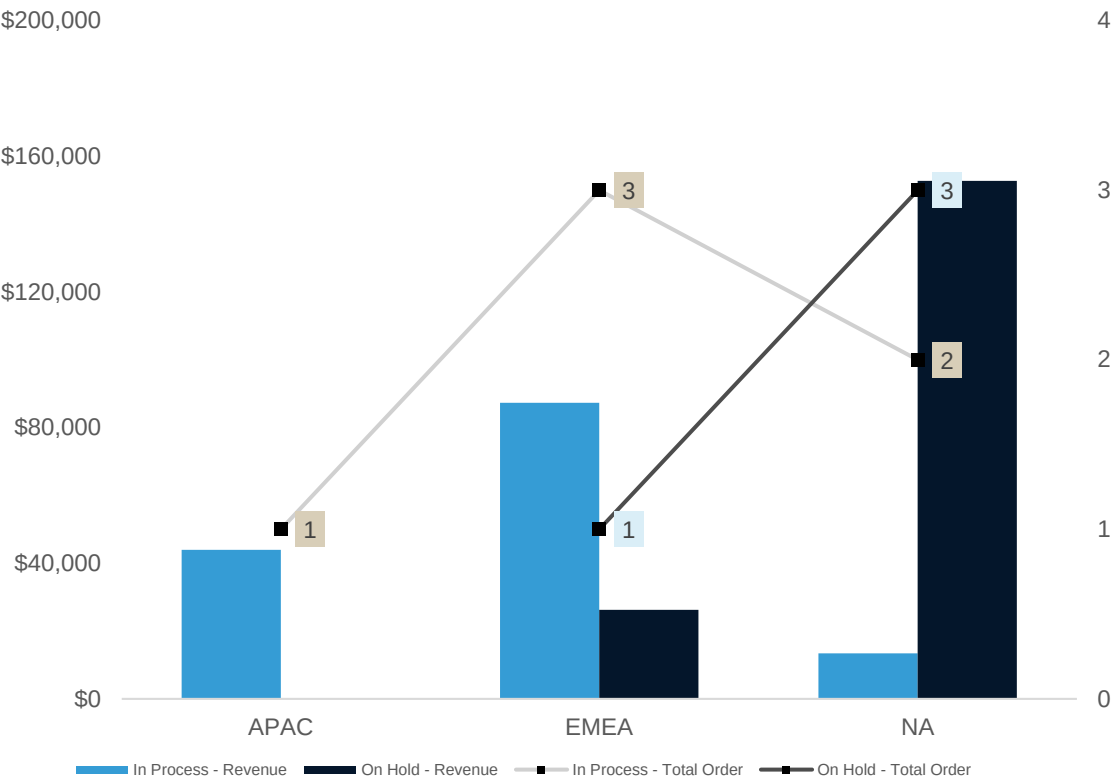

The **429 units** canceled or disputed by UK Collectables were spread across more than 13 SKUs, with none exceeding 41 units, meaning the issue was not due to a specific product defect. Upon further investigation, **both UK Collectables** and **Euro Shopping Channel** recorded **failures in the same month, June 2004**, which coincided with a sharp decline in EMEA revenue trends. Most likely, **shipping or supplier issues** (order fulfillment problems) were the cause, rather than problems with specific products or customers.

Which Territory Has the Most Revenue Stuck On Hold?

NA holds 85% of all On Hold revenue across 3 separate customers, each with a single stuck order

Pending Revenue by Territory (In Process vs. On Hold)

Pending Orders by Customer and Status

Customer Name	In Process		On Hold	
	Total Order	Revenue	Total Order	Revenue
APAC				
Souvenirs And Things Co.	1	\$ 43,971		
EMEA				
Euro Shopping Channel	1	\$ 35,133		
La Rochelle Gifts	1	\$ 43,785		
Petit Auto	1	\$ 8,412		
Volvo Model Replicas, Co			1	\$ 26,260
North America (NA)				
Diecast Classics Inc.	1	\$ 6,167		
Gifts4AllAges.com			1	\$ 48,317
Mini Gifts Distributors Ltd.	1	\$ 7,262		
Tekni Collectables Inc.			1	\$ 46,519
The Sharp Gifts Warehouse			1	\$ 57,883
Grand Total	6	\$144,730	4	\$178,979

On Hold revenue is dominated by **North America (85%, \$152,719 across 3 customers)**, but shows no concentration pattern, each customer has exactly one held order, with no repetition. Timing also **doesn't point to a single event**: holds span 11-2004, 04-2005, and 05-2005, with only Tekni Collectables Inc. and The Sharp Gifts Warehouse overlapping in April 2005. This indicates isolated, **customer specific causes** (e.g. credit check, missing documentation) rather than a systemic NA wide fulfillment issue.

Does Deal Size Causes Orders Get Held?

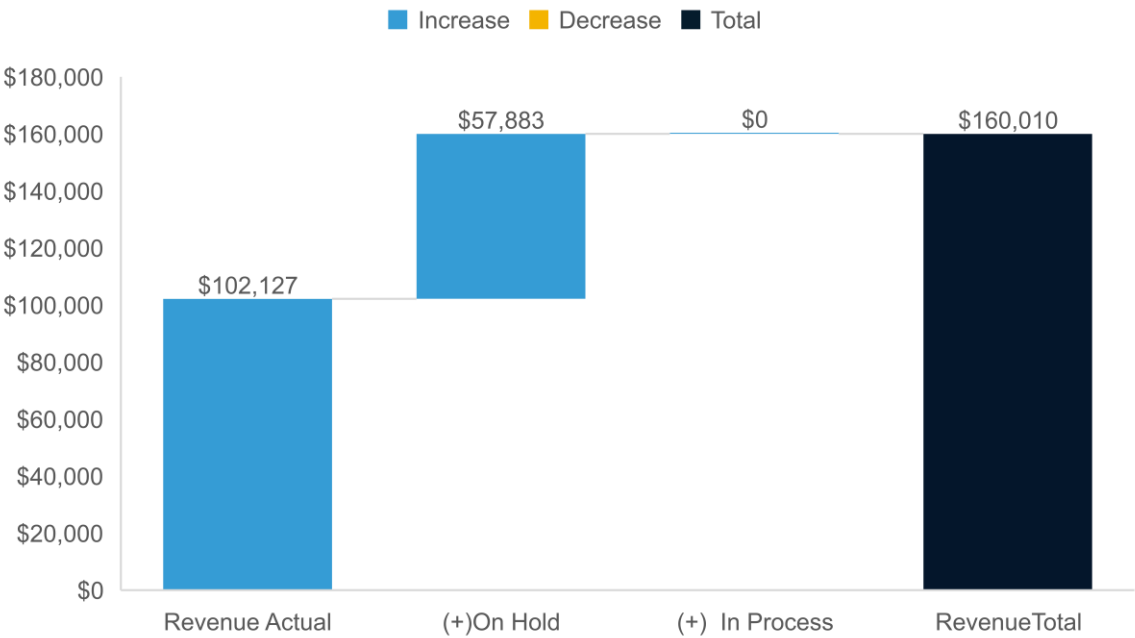

No, each customer's held order has a different deal size mix, ruling out deal size as the common cause

On Hold Revenue by Deal Size per Customer

Customers	Deal Size	Revenue	Quantity
Gifts4AllAges.com	Medium	36,912.17	376
	Small	11,404.72	130
Tekni Collectables Inc.	Large	14,627.75	162
	Medium	24,726.63	307
	Small	7,164.62	116
The Sharp Gifts Warehouse	Large	28,312.94	211
	Medium	23,408.54	251
	Small	6,161.61	109
Volvo Model Replicas, Co	Medium	21,294.49	163
	Small	4,965.72	54

Deal size composition varies per customer, **The Sharp Gifts Warehouse** and **Tekni Collectables Inc.** span all three sizes (Large/Medium/Small), while **Gifts4AllAges.com** and **Volvo Model Replicas, Co.** only have Medium/Small. This inconsistency rules out deal size as a common driver of On Hold status. This indicates isolated, customer-specific causes (e.g. credit check, missing documentation) rather than deal size or a systemic NA wide fulfillment issue.

Revenue Recovery Potential - The Sharp Gifts Warehouse

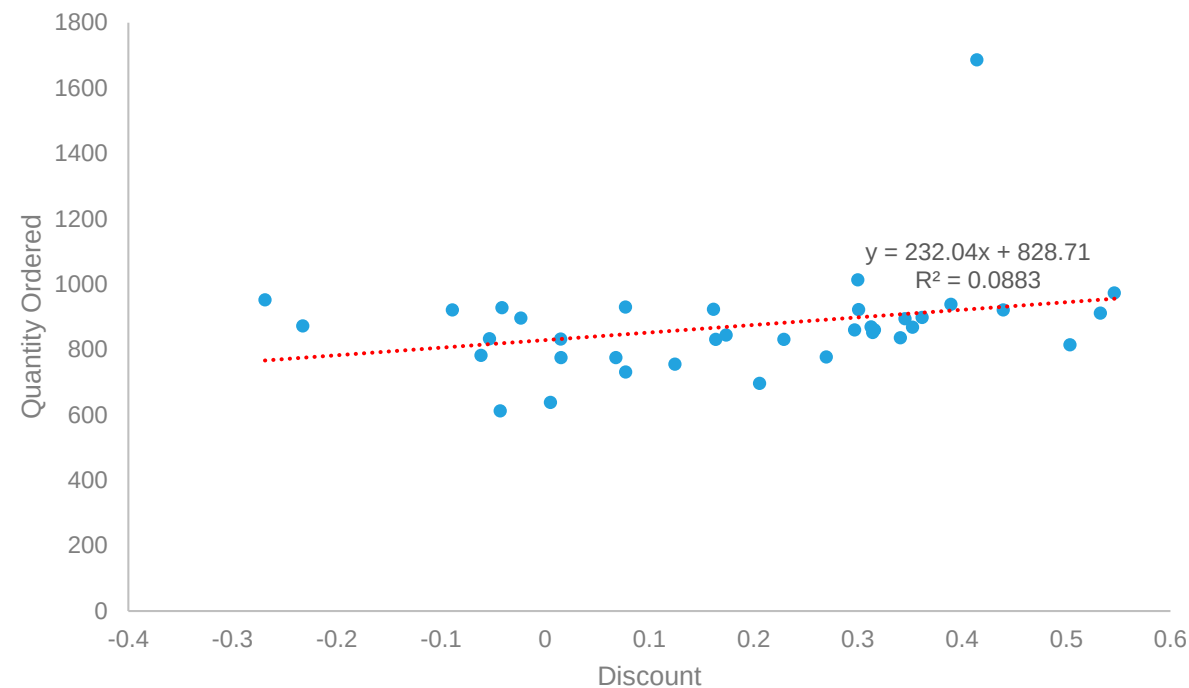

If The Sharp Gifts Warehouse's On Hold order (\$57,883) is resolved, revenue rises from \$102,127 to **\$160,010**, a 57% increase for this single account.

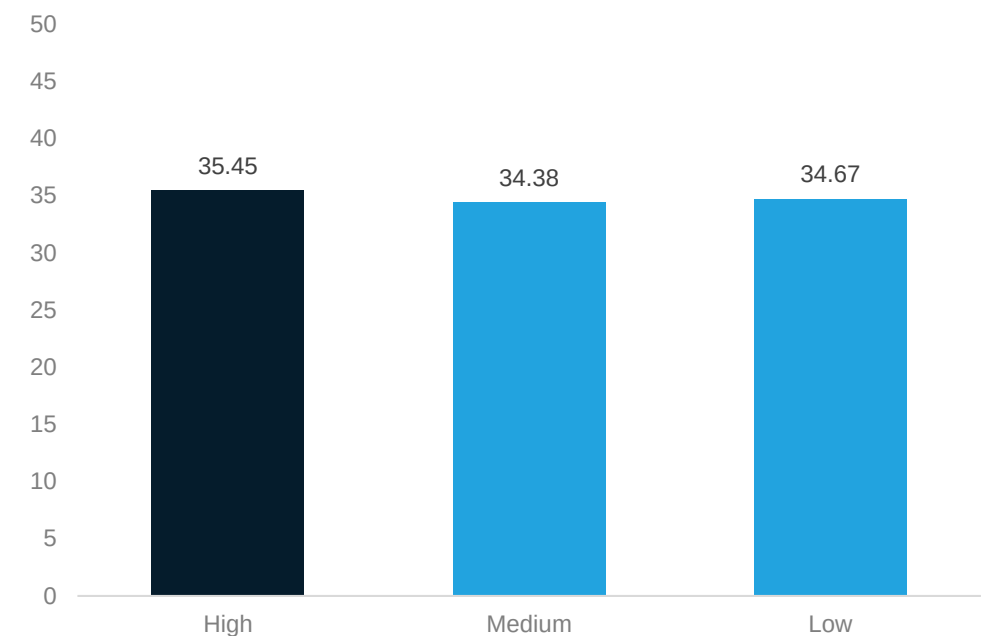

Does Discount Level Drive Higher Order Volume in Classic Cars?

No, average order quantity is virtually identical across High, Medium, and Low discount groups

Price Discounting Fails to Drive Incremental Volume in Classic Cars

Bucket Analysis: Average Order Quantity By Discount Level

Discount explains only 8.8% of order volume variation ($R^2=0.0883$), and bucketing confirms it: average quantity per order is nearly flat across High (35.45), Medium (34.38), and Low (34.67) discount groups, a spread of under 3%. **Giving a High discount buys no meaningful volume gain over a Low one.** For a wholesale business, this means every dollar discounted on Classic Cars beyond the minimum needed to close a deal is pure margin given away, not a growth investment.

Recommendations

1 EMEA Revenue Loss (June 2004)

Investigation shows the EMEA revenue loss (77.6% of all lost revenue) traces to a single fulfillment event in June 2004 affecting two unrelated customers (UK Collectables, Ltd. and Euro Shopping Channel) across 13+ SKUs, ruling out product defect or customer specific causes.

Recommendation: Conduct a specific audit of the shipping/supplier process for June 2004 and replicate the preventive checks for the same period

2 North America On Hold Revenue

Revenue on hold totaling \$152,719 (85% of the total on-hold amount) came from three separate customers in months that were far apart. This random time span demonstrates that the problem is purely an administrative issue per customer (credit/document check), not a failure in our system or a specific event that typically occurs simultaneously across a territory.

Recommendation: Speed up the document resolution/credit check process, since the root cause is administrative in nature and specific to each customer, rather than systemic across all customers.

3 Classic Cars Discount Policy

The discount level explains only 8.8% of the variation in order volume for Classic Cars ($R^2=0.0883$), the average number of orders is nearly identical across the High/Medium/Low discount levels. The current discount levels for Classic Cars do not drive significantly larger orders.

Recommendation: Conduct a controlled price test (A/B testing) on Classic Cars to reevaluate discount sensitivity before a full rollout

4 Structural Dependence on Pricing Below MSRP

70.1% of all units are sold below MSRP, with Classic Cars alone accounting for 28% of that volume, the very product line that generates the highest overall revenue and volume.

Recommendation: Re-evaluate Classic Cars' net profit to ensure that high sales do not erode margins and to avoid offering excessive discounts.
